By Author, B.A. Shastri Author. Who is. Learn Hindi In Hindi Using Movie Songs In Hindi - Learn Hindi Through Kannada - Kannada to Hindi - * This app helps you to learn Hindi easily. * You can start learning spoken Hindi in just .Q: Refactoring code in an object, knowing its dependency to another object I am learning Java now, and I came across a problem that I didn't know how to solve. Basically I have a ArrayList a and another ArrayList b. a has the (other) dependencies for b. I need to create b with the dependencies in a and I have written the following code, but it does not work: a.addAll(b); //b is empty b.addAll(a); //a contains b Any idea how to solve this? Note: The arraylists have different sizes (different lengths). Thanks in advance! A: Any idea how to solve this? An easy (and possibly idiomatic) solution is to refactor the list b into its own collection class. (I wouldn't do this until you understand why it's a good idea.) Here's a completely artificial example: public class Thing { private List dependency; public void setDependency(List dependency) { this.dependency = dependency; } } You can use that to get to the result you want: 2d92ce491b
