The oxidation of oxygen by the respiratory chain generates the proton-motive force that is used to synthesize adenosine triphosphate (ATP) by other enzymes. In the neuronal cell, COX is the primary site of oxygen reduction and the end-product of oxygen reduction is a diffusible signal, cytochrome c. The binding of cytochrome c to COX is tightly coupled to catalytic turnover of the oxygen reduction reaction. The COX-cytochrome c-oxygen binding reaction is exquisitely sensitive to oxygen, the reduction potential of the site, and other chemical modifications. A major aim of this proposal is to determine the structural determinants

Badki and Chutki live a fun life in Banaras, playing pranks, slipping away to see the forbidden Mujra, and soaking up all the excitement that goes on. How you will live with them throughout your life is up to you. But now if they haunt you, you cannot sleep, so you cannot eat, you cannot drink, you cannot do anything - you can only talk and cry. And eventually they will come to show you that it is not in their best interest and that they too suffer from it. And then you will understand that they are people too, and that you are all people, and that there is no one above and that there is no one below, and that we are all one family. fffad4f19a
