Video-games are an important type of strategy and action-games. It is played on a special game-board. The computer programs of the game-board are controlled by the player, who plays as the character on the game-board. In many video-games the player moves around the game-board using game-mechanisms in his body. Each player controls one character. There are two types of video-games: two-player games and multi-player games. A two-player game is played by two players at the same time. One player controls the character of the game. The other player controls the character of the game. A multi-player game is played by more than one player at the same time. A multi-player game usually has a division of the game-board into two or more areas. Each player controls a character in an area. Video-games are a very interesting and active area of science.
