
A KeyMACRO utility is used to manage global MAC (Media Access Control) keys on a system or per file. On UNIX, it is a common way to manage a key and create a key file. Users can manage multiple MAC keys with different priority on the same system and create as many key files as desired. Features: KeyMACRO is a stand-alone utility with no dependencies. It uses a powerful parser to allow users to edit key mappings and manually enter a key binding, or define a key binding with associated key modifier. Key MACRO is able to support key mappings for multiple types, including key binding and key modifier. It supports file-based mappings, and can load mappings from a file, a registry key, or the current folder. It supports multiple sessions for each user with its own key mappings. KeyMACRO is a friendly GUI interface for managing media keys, media players, and media streamers on the desktop, laptop, or mobile. It displays the currently mapped key mappings, allows the user to modify or add key mappings, and offers the ability to load a key binding file from a file or the current folder. In addition to the key mappings, KeyMACRO can be configured to handle key bindings that are triggered by media players (such as VLC, WMP, Totem, MPC, and more) or media streamers (such as Kaffeine, Minim, MPlayer, and more). KeyMACRO supports the following key types: key binding, key modifier, and media player-triggered key binding. KeyMACRO uses the following key types: key binding key modifier media player-triggered key binding KeyMACRO can also load key mappings from a key file or the current folder. KeyMACRO supports the following key formats: KeyMACRO supports the following media formats: keybinding file audio file audio file that contains a key audio stream video file video file that contains a key video stream KeyMACRO does not support the following media formats: keybinding file that contains key modifier audio file that contains key modifier audio stream that contains key modifier audio stream that contains key video file that contains key modifier video file that contains key video stream that contains key modifier video stream that contains key KeyMACRO can also handle the following media key types: command key 45cee15e9a
