Category:Video game development software Category:Emulation softwareQ: Fixing 404 not found on S3 PHP I've installed an application on a server, hosted in an Amazon S3 bucket. The app runs fine. However, when I call a page, it returns 404 not found and when I try to call another one, I receive the following error: Can't connect to S3 This is because there's a route handler, which does a redirect on the 404. What would be the best way to fix this? A: I guess you don't have S3 support in your app or it's still in development. You should get 404 not found from S3, but from your server, not from the browser. So, you could override Apache's 404 with a 302 (to continue with the original URL). First, let's create a file in Apache to override the default Apache 404: RewriteEngine On RewriteCond %{REQUEST_FILENAME}!-f RewriteCond %{REQUEST_2d92ce491b
