By 1995, AutoCAD had become the most widely used and best-selling commercial CAD program. AutoCAD is used in architecture, automotive, construction, civil engineering, electrical, industrial design, mechanical, packaging, plumbing, surveying, and architecture. Other applications include non-CAD tasks, such as: drawing floor plans, symbolizing and labeling drawings, plan drawing, and drawing/mapping. In October 2017, Autodesk acquired the former NCR Corp.'s engineering and software businesses. In November 2017, Autodesk sold its PLM software business to Siemens. History AutoCAD is a registered trademark of Autodesk, Inc. The origins of AutoCAD began in 1981 when a company called CadSoft developed a drawing system called AutoDraw. AutoDraw was a native application for the CP/M operating system for the Tandy 1000 and other TRS-80 computers. The first AutoCAD prototype was created in 1981 by three programmers working at CadSoft and a typographic artist for Tandy Corporation named John Reznicek. The AutoCAD name was taken from the initials of "automatic design". John Reznicek wrote a letter to Tandy Corporation introducing the concept of the new software, which was one of several options under consideration by Tandy's project design group. The development team at CadSoft had encountered difficulty implementing the graphical aspects of a drawing program in the CP/M operating system. The program was first sold by MicroPro Software for \$199.00 in October 1982. In the first year, 3000 copies were sold. Initially, the program was only available as an OEM version for the TRS-80 Model III. On January 11, 1983, Autodesk purchased the MicroPro Software's OEM rights to AutoCAD. CadSoft continued to develop the application through 1982 and 1983. Tandy Corporation completed the development of their own version of the program, called "AutoCAD Studio", in 1983. On July 11, 1983, AutoCAD was released as an OEM version for the TRS-80 Model 100 and 200. In 1984, the AutoCAD name was applied to a new product of the same basic codebase as AutoDraw. It was originally sold by MicroPro Software, Autodesk's OEM licensee for the TRS-80 in 1984. AutoCAD II, a new product in the same basic codebase as AutoCAD was
