LiveFreeRam Crack+ [Win/Mac]

KEYMACRO is a small utility that lets you record (and replay) keyboard macros. Here is a description of what it can do: Automate boring repetitive tasks: if you use a lot of identical tasks and want to perform them faster, you can create a macro for the task and then call it whenever you need. Macros can also be used to fill a clipboard with text data, you can use it to transfer some information to another machine, create a "wish" list or a contact list. Other uses: keymacro can also be used as a password protector for your documents or emails. It could be a cool idea to record your favorite bank or credit card number and use it as a anti-fraud protection system. Keymacro is a free utility. It has been tested on Windows 10, 8 and 7 (32 and 64 bit) and works fine. Download the latest version from: Give it a try and tell us what you think about it. If you have any issues or comments, feel free to send an email to: support@softperfect.com What's new: ------------------ v.1.0.6.1 (November 9th, 2018) - Implemented a workaround to a Windows vulnerability. - Make sure to restart after installing the new version. v.1.0.6 (November 8th, 2018) - Fixed a memory leak issue. - Make sure to restart after installing the new version. v.1.0.5 (October 24th, 2018) - The keyboard shortcuts for saving/loading macro settings are now customizable. - A warning message is now displayed when you try to save the macro configuration for a macro that has already been saved. v.1.0.4 (September 11th, 2018) - A configuration file is now generated when the macro is created. - You can now assign a custom name to your macros. - A new "comment" column is available in the database window. - New "active" column in the database window. - New option added to open the Keymacro library from the "Tools" menu. - A new password field added in the keymacro.ini configuration file. - Implemented new "Misc" menu option to show the "debug window". - Several other minor corrections and improvements. 77a5ca646e

LiveFreeRam

LiveFreeRam is a lightweight Windows application designed with a single goal in mind: to help you keep an eye on the free RAM memory. The tool is able to monitor your free RAM memory in real-time, so the information is automatically updated according to your system changes. Simplistic layout and basic functionality LiveFreeRam sports a clean and simple-to-configure interface that allows you to carry out most operations with minimal effort. Everything is kept as simple and clear as possible, so even rookies can master the entire process with minimal effort. The utility gives you the possibility to view the amount/percent of RAM memory in real-time displayed directly into the primary panel. Additionally, you can make the app remain on top of other utilities, and this proves to be pretty useful especially when you are working with multiple tools at the same time. There are no configuration parameters, as LiveFreeRam is able to automatically display the detected amount of RAM memory in the main window. Results show you your computer performance, and you can manually optimize your system functionality by closing the unused applications. During our testing we have noticed that LiveFreeRam carries out a task very quickly, displays the amount of free RAM memory in real-time, and no errors showed up throughout the entire process. It leaves a minimal footprint on system resources, so the overall performance of the computer is not hampered. Bottom line To sum things up, if you are looking for a simple-to-use application that comes bundled with only a few features for helping you keep track of your free RAM memory, you can give LiveFreeRam a try and see what it can do for you. Description: Wabara is an impressive utility designed with a single goal in mind: to help you keep an eye on your free RAM memory. The utility is able to monitor your free RAM memory in real-time, so the information is automatically updated according to your system changes. Simplistic layout and basic functionality Wabara sports a clean and simple-to-configure interface that allows you to carry out most operations with minimal effort. Everything is kept as simple and clear as possible, so even rookies can master the entire process with minimal effort. What's New in the?

LiveFreeRam is a lightweight Windows application designed with a single goal in mind: to help you keep an eye on the free RAM memory. The tool is able to monitor your free RAM memory in real-time, so the information is automatically updated according to your system changes. Simplistic layout and basic functionality LiveFreeRam sports a clean and simple-to-configure interface that allows you to carry out most operations with minimal effort. Everything is kept as simple and clear as possible, so even rookies can master the entire process with minimal effort. The utility gives you the possibility to view the amount/percent of RAM memory in real-time displayed directly into the primary panel. Additionally, you can make the app remain on top of other utilities, and this proves to be pretty useful especially when you are working with multiple tools at the same time. There are no configuration parameters, as LiveFreeRam is able to automatically display the detected amount of RAM memory in the main window. Results show you your computer performance, and you can manually optimize your system functionality by closing the unused applications. During our testing we have noticed that LiveFreeRam carries out a task very quickly, displays the amount of free RAM memory in real-time, and no errors showed up throughout the entire process. It leaves a minimal footprint on system resources, so the overall performance of the computer is not hampered. Bottom line To sum things up, if you are looking for a simple-to-use application that comes bundled with only a few features for helping you keep track of your free RAM memory, you can give LiveFreeRam a try and see what it can do for you. CPU Locks is a lightweight Windows application designed with a single goal in mind: to help you keep an eye on the CPU usage. You can view your overall CPU usage, as well as specific information about your active processes, performance counters and the CPU usage of each one of them. Simplistic layout and basic functionality CPU Locks sports a clean and simple-to-configure interface that allows you to carry out most operations with minimal effort. Everything is kept as simple and clear as possible, so even rookies can master the entire process with minimal effort. All performance information is shown in real-time, and it's displayed in the CPU usage pane. The task is quite straightforward, so even rookies can monitor the system in real-time without any problems. It also displays the total number of active processes, which is pretty convenient and insightful. You can minimize all processes, change the opacity of the main window, or close the app. The application uses a really clean interface, and the only thing you need to do is to click on the button to start monitoring CPU usage and performance counters. Once you click it, the window is updated with all the required data. If you have no idea what each parameter does, you are able to view detailed information about them

System Requirements:

OS: Windows 7 (64 bit) or Windows 8 (64 bit) Windows 8.1 (64 bit) Mac OS X (Version 10.9 or higher) iOS (Version 9 or higher) Android (Version 4.4 or higher) Processor: Dual Core Processor Memory: 2GB or more RAM Hard Disk: 2GB
