[Figure S11](#app1-molecules-25-01744){ref-type="app"} displays the differences between the LE and RE of standard XN--DHA and XN--DHA, respectively. On the basis of the diffraction patterns, the changes in the refractive indices of the XN-DHA and XN-DHA samples were calculated, and [Figure 11](#molecules-25-01744-f011){ref-type="fig"} shows a comparison of the refractive indices of XN--DHA with the LE, RE and standard XN--DHA. [Figure 11](#molecules-25-01744-f011){ref-type="fig"} reveals that the minimum and maximum refractive indices of the XN--DHA samples were observed to be 2.07 and 2.31, respectively. This variation corresponds to a refractive index gradient of 0.14. Meanwhile, the values of the XN--DHA samples were observed to be higher than the corresponding standard XN--DHA sample, which shows the formation of an \*O\*-DHA layer on the XN polymer. The average refractive index of the XN--DHA sample is about 2.30, which is higher than that of the XN sample and close to that of the RE sample (2.29), and this shows the formation of a high-quality and highly ordered O-DHA coating layer on the surface of XN. [Figure 12](#molecules-25-01744-f012){ref-type="fig"} shows a graph of the thickness of the coating layer of XN--DHA and DHA--XN. The thickness of the coating layer of DHA--XN was determined to be about 0.34 nm. Meanwhile, the thickness of the coating layer of XN--DHA was calculated to be about 0.50 nm. This difference in the thickness of the coating layer reveals the formation of a high-quality and highly ordered \*O\*-DHA coating layer on the surface of XN.

Key macro is used to make recording all functions (hotkeys) and change default settings. You can record the keys with the correct command sequence. You can change the values in the program, save the file with the \*.txt extension. Key macro works in recording mode and allows you to set and change various parameters of the selected function. Then you need to paste the results in the appropriate format. Using KEYMACRO, it is easy to save the settings of the selected function for future use. In the program's settings file is also the ability to change the name of the text file created. Key macro lets you record keys and use them to control different functions. Properties of the key macro: ♦ The file is saved in the folder "Data". ♦ The file extension is ".txt". ♦ A maximum number of macros, up to 10 macros. ♦ Use the same file for the macro settings. ♦ The record can be started and stopped by pressing the key, and you can change the settings of each macro. ♦ You can manually change settings and set the file name. ♦ Resetting the settings and the file name. \* Currently only recorded keys are available. Features of the Key Macro: ♦ You can change the settings of each function and save them. ♦ You can set each macro. ♦ You can record each key. ♦ You can use the same file settings for a macro. ♦ You can set the name of the file created. ♦ You can reset the settings and the file name. \* Currently only recorded keys are available. Key macro setting: ► Parameters: • Name of the text file (default) - SETTINGS. • Name of the folder where the macro is recorded (default) - DATA. • Address of the txt file to use for setting the macro (default) - SETTINGS. • Name of the txt file to use for setting the macro (default) - SETTINGS. The file in the folder "DATA" has the following format: \* Key macro is only saved when the number of macros is less than or equal to 10. Key macro is saved only after the key is pressed. Menu: ► Settings ► Settings. ► Clear the macro. ► Record the current key macro. ► Load saved macro. ► Save. ♦ 1d6a3396d6
