Bosch Esi Tronic Keygen for 2013 12/2/2013.12 Jan 2013 Bosch esi tronic keygen 1q.2013 is a multifunctional device for controlling Bosch Esi Tronic connected series.1. Technical Field The present invention relates to non-volatile semiconductor memory devices, and more specifically, to a non-volatile semiconductor memory device which enhances charge storage efficiency by allowing a capacitor dielectric film to have asymmetrical shapes in order to allow the capacitor dielectric film to assume a thicker sectional shape while suppressing depletion. 2. Related Art In a non-volatile semiconductor memory device, electric charge is accumulated in a floating gate of a memory cell to form a threshold voltage which is used to judge storage data. A memory cell array is formed of a matrix composed of a plurality of word lines extending in a row direction and a plurality of bit lines extending in a column direction. A unit area (memory cell) is defined by crossing a word line and bit line, and a plurality of memory cells are formed in an area surrounded by word and bit lines. A problem occurs in this memory cell array in that the charge accumulated in a memory cell cannot be held stable due to the following reasons: first, a leak current in a tunnel oxide film is increased along with miniaturization of the non-volatile semiconductor memory device, and a difference in a leak current between a writing operation and a reading operation (hereinafter referred to as a read-out characteristic) is increased; and second, interference with adjacent lines, local interference due to a switching circuit, and the like may also cause the charge accumulated in the floating gate of the memory cell to leak to the outside. Thus, in order

to solve the problem of the charge accumulated in the floating gate of the memory cell leaking, Patent Document 1 discloses a non-volatile semiconductor memory device in which there is provided an oxide film having a capacitor dielectric film shape that differs from a shape of a capacitor dielectric film of a memory cell, which is a two-layer film including a silicon nitride film and a silicon oxide film, the shape of the capacitor dielectric film being formed in a columnar 1cdb36666d
